MEMORANDUM FOR : Deputy Director (Plans)

THROUGH : Acting Chief, Development Projects Division,

SUBJECT : System X

STAT

1. Attached is paper on the System X. The two system concept, i.e., first broad band for searching and changing to narrow band for frequency of interest, is a sound one; however, the cost figure on page 3 is based on the old System X and for up-dated equipment would be \$1.5 million.

STAT

2. John Parangosky was a bit disturbed with the \$1.5 million figure and before proceeding further with HRB is soliciting a proposal from another source.

3. paper mentions the U-2 and the A3D. SPB states that the loitering time for the U-2 is in the nature of five to seven hours, whereas the A3D loitering time is substantially below this figure.
